**Needs**

People with disability (PWD's) who live in poor socioeconomic situations in general and buffered marginalized areas from different age groups has different health needs. No. of Children with disability or multiple disability whose age below 18 years are (330 male, 270 female) suffered from multiple health problems such as malnutrition which lead to increase of anemia, bed sores, respiratory problems and other health problems, as the majority are dependable on oxygen vaporizers, healthy food, diapers and assistive devices. Shortage of health services delivered by Ministry of Health (MoH) beside energy crisis increase the sufferings and made double burdens on their families, the project will target male children more than females children because statistical studies show that 55% are males and 45% are females (Annual Joint Disability Report, NSR&MRS:2015). Female children with disability are more vulnerable than male children as they face social discrimination by the families and the society role and traditions. Those children from both genders are in need of food supplements, enriched milk to treat anemia as life-threatening disorder, assistive devices as air mattress and other motor devices, power supply to compensate continuous power outage, other medical supplies as oxygen vaporizers, suction machines and drugs to treat fits, skin problems, respiratory problems and neurological disorders are highly needed, and training on good healthy practices by their caregivers at homes to increase knowledge, skills and home management, the second category are people with spinal cord injuries and electric wheelchair users whose age between 18-59 years with estimate of (120 male, 80 female) who suffered from restrictions of mobility to reach work sites and educational facilities easily resulted from damage to battery of electric wheel chair because of insufficient recharging of batteries and shortage of assistive devices. Female persons with disability are more vulnerable than male due to social restrictions on their movement and participation and having fewer chances to be integrated into social events. Furthermore some health problems threatening life like bed sores, urinary tract infections, and others, The project will target males more than females because they are exposed to accidents and aggressive attacks during conflicts, those people in need of continuous medical care at home to prevent possible complications, and providing them with disposable medical supplies, assistive devices, new batteries for wheel chair and drugs, the third category is elderly people with disability whose age above 59 years (270 male, 180 female) who are suffering from complications of health-threatening conditions like chronic diseases as diabetes, blood pressure, arthritis and heart problems which worsen their health conditions, Recent studies shows the incident rate nearly affect males more than females (Health Information Unit, MOH: 2016). Those people in need of massive medical care at home including assistive devices, drugs, disposable and non-disposable medical supplies and supporting personal skills of caregivers through training their family members about proper health practices, The above-mentioned needs was discussed through 5 focus groups of PWD's in 4 governorates include males and females from different backgrounds, kind of disability and ages. Besides the information gathered during regular work of NSR as feedback revision to urgent and essential needs of PWD's affect their health status.

### **Activities or outputs**

1. Conducting home visits to assess health needs and setting intervention plan for people with disability from both genders and their families.
2. Providing 600 children with a disability (170 female and 330 male) who suffer from malnutrition and other respiratory problem with food supplements, enriched milk and health equipment such as suction machine, Nebulizer, and...etc.
3. Providing healthcare services such as disposable medical supplies, batteries, assistive devices for 200 wheelchair users (120 male and 80 female) to prevent a secondary condition like bedsores, urinary tract infection and others.
4. Meeting needs of People with Disability from both genders with assistive devices and disposable medical supplies such as a wheelchair, commode chair, and walkers...etc. and hygienic kits.
5. Referring 500 PwD (270 Male and 230 Female) in need of specialized health services to community health services.
6. Providing 450 elderly People with Disability (270 and 180) with assistive devices, medical equipment such as glucometer...etc.
7. Impact study will be conducted through the implementation with the beneficiaries to explore their satisfaction beside of regular follow up meetings on monthly bases.

Note: the project implementation will be coordinated with different stakeholders related such as Ministry of Health, Ministry of Social development, health cluster, rehabilitation subcluster, HI, community healthcare service providers.

### **Indicators and targets**

1. 90% of children with a disability (55% out of the 90% are male and 45% out of the 90% are female) are improving their health and nutritional status from services delivered.
